

WHAT IS CLAIMED IS:

1. A medium conveying apparatus comprising:
 a conveying roller shaft which is movable along a leaving
direction with respect to a conveying path of medium; and
5 a pressing member which presses said shaft in its several
positions for making said shaft to approach said conveying path,
 wherein said pressing member makes said shaft to leave in
parallel with said conveying path when said shaft is made to leave
said conveying path by said medium.

10 2. The medium conveying apparatus according to claim 1,
wherein said pressing member is made from a rigid material which is
almost not deformed when its own is pressed by an external force.

15 3. The medium conveying apparatus according to claim 1,
wherein said pressing member presses said conveying roller shaft in at
least one position in an area where the medium is conveyed.

20 4. The medium conveying apparatus according to claim 1,
wherein an adjusting portion which adjusts a pressing state of said
conveying roller shaft is arranged in at least one of supporting
mechanisms at both ends of said pressing member.

25 5. The medium conveying apparatus according to claim 1,
wherein said pressing member constructs a part of a guide which
guides the medium.

6. The medium conveying apparatus according to claim 1,
wherein said pressing member is mounted such as being rotatable.
